

India – Successful Orange Farm Field Trial

May 31, 2025

Dear Friends,

We're pleased to report successful Orange Farm Field Trial results from Gummakonda Village, Kurnool District, Andhra Pradesh. Using **Bio.PlantZ**, farmer Mr. Surya Prathap Naidu achieved exceptional outcomes on his 3-acre orchard of 4-year-old orange trees.

Also, this season marked Mr. Naidu's first harvest, yielding an impressive **4 tons** of fruit. He applied Bio.PlantZ four times at 15-day intervals during the flowering stage, synchronized with his irrigation schedule.

What makes these results particularly encouraging is the complete absence of pest or disease issues throughout the season. The orange trees showed healthy, vibrant foliage and robust growth, demonstrating the product's effectiveness.

Based on the current plant health and fruit development, Mr. Naidu expects his yield to double to **8 tons** in the upcoming June harvest. We will keep you posted on the same.

These results strongly demonstrate the efficacy of Bio.PlantZ in enhancing plant vigor and productivity, providing valuable insights for other farmers seeking to improve crop yields in the region.

Below, please find the YouTube link to watch the video testimonial from the farmer sharing his firsthand experience and remarkable results.
